Agreements with client

Some of the agreements we have with our client is that we are going to deliver a desktop application by the 27th of March, that will be used by the Human Resource managers and employers of Media Bazaar. The managers will have complete control of the application, where they can add, update, view or delete employees from the system. On the other hand, employees will be able to view and update personal information such as name and address. Both managers and employees will have access to statistics that will give them a better understanding of what is going on, statistics such as how many employees are currently working, how many employees work on a certain day and much more.

In addition to the agreements above, we will be delivering a web application alongside an updated version of the desktop application to our client by 8th of May 2020.

Users of the web application will be stock managers; they will have total control of the application and can view or send requests for a restock when Media Bazaar is low on supply.

By the end of week 18 we will deliver a complete package of 3 applications to our client. The updated desktop application, web application and a separate desktop application that will be used by the department managers; the third application will be to manage the shop per department. So, department managers (if they have the authorization) can pretty much add, update, delete or view products in the shop

HR-Functional Requirements

FR-HR_APP_01: The app should provide a user-friendly interface to let a user easily view statistics and the work schedule.

FR-HR_APP_02: A user should be able to view and update their personal information.

FR-HR_APP_03: A user should be able to add an employee to the system.

FR-HR_APP_04: A user should be able to edit an employee in the system.

FR-HR_APP_05: A user should be able to delete an employee from the system.

FR-HR_APP_06: A user should be able to view an employee in the system.

FR-HR_APP_07: A user should be able to update an employee's shift.

FR-HR_APP_08: A user should be able to view all departments.

FR-HR_APP_09: A user should be able to view all employees.

FR-HR_APP_10: A user should be able to login with their email and password.

FR-HR_APP_11: A user should be able to logout from the application.

FR-HR_APP_12: A user should be able to filter the work schedule by roles.

FR-HR_APP_13: A user should be able to search for a staff member.

FR-HR_APP_14: A user should be able view fulltime employees.

FR-HR_APP_15: A user should be able view part-time employees.

FR-HR_APP_16: A user should be able view dayshifts.

FR-HR_APP_17: A user should be able view nightshifts.

FR-HR_APP_18: A user should be able to view real-time statistics.

FR-HR_APP_18: A user should be able to submit their preferred shifts for scheduling.

FR-HR_APP_19: A user should be able to add weekly new schedules.

HR Use Cases (1-3)

Use case: UC-HR_APP_01: Updating employee's shifts.

Actor: HR Manager.

Pre-conditions: HR Manager is logged in.

Main Success Scenario:

1. A manager double clicks on an employee from the table.
2. System opens a new form with employee information.
3. Manager selects time and date to from the dropdown list and calendar.
4. The system confirms that employee is assigned to shift.

Extensions:

- 4a. Form to assign employee
 1. If there's no data, the system will give an error.
 2. If the employee is not available, the system will suggest a reserved employee.
 3. If data is available and employee is assigned to a shift, the system will display message.
indicating success of the action.
 4. End of use case.

Use case: UC-HR_APP_02: Viewing work schedule of staff members.

Actor: HR Manager/Employee.

Pre-conditions: HR Manager/Employee is logged in.

Main Success Scenario:

1. HR Manager/Employee clicks on the view all shifts button.
2. The table displays all members that is assigned to a shift.

Use case: UC-HR_APP_03: Deleting an employee.

Actor: HR Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Manager selects an employee from the display.
2. Manager clicks on the fire an employee button.
3. System displays a pop-up window.
4. System displays a message that user is successfully removed from the system.

Extensions:

- 3a. Pop-up window asking the manager to confirm decision
 1. Manager clicks yes.
 2. Continue to MSS step 4.
 3. Manager clicks no.
 4. Return to MSS step 2.

HR Use Cases (4-6)

Use case: UC-HR_APP_04: Updating an employee's information.

Actor: HR Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Manager selects an employee from the display.
2. Manager clicks on the update an employee button.
3. System opens a new page with employee's information.
4. Manager fills input with relevant information.
5. Manager clicks on the done button.
6. System displays a successful message.

Use case: UC-HR_APP_05: Adding an employee to the system.

Actor: HR Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Manager clicks on the add an employee button.
2. System opens a new page with empty fields.
3. Manager fills input with relevant information.
4. Manager clicks on the 'done' button.
5. System displays a successful message.

Use case: UC-HR_APP_06: Filter work schedule information.

Actor: HR Manager/Employee.

Pre-conditions: Manager/Employee is logged in.

Main Success Scenario:

1. User clicks home tab
2. User clicks the filter dropdown list.
3. User selects Manager or Employee from the list.
4. The table will show the information based on selected filter.

Extensions:

- 1a. User clicks on the Statistics tab
 1. Return to MSS step 2

HR Use Cases (7-9)

Use case: UC-HR_APP_07: Search for a staff member.

Actor: HR Manager/Employee.

Pre-conditions: Manager/Employee is logged in.

Main Success Scenario:

1. User clicks home tab.
2. User fills in name of the staff in the textbox.
3. User clicks on the search button.
4. The table will show the information based on the value in the textbox.

Extensions:

- 1a. User clicks on the Statistics tab
2. Return to MSS step 2.

Use case: UC-HR_APP_08: Sort names in the table.

Actor: HR Manager/Employee.

Pre-conditions: Manager/Employee is logged in.

Main Success Scenario:

1. User clicks home tab.
2. User clicks the sort button.
3. Staff members in the table will be sorted alphabetically by name.

Extensions:

- 1a. User clicks on the Statistics tab
1. Return to MSS step 2.

Use case: UC-HR_APP_09: Viewing all employees.

Actor: HR Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Manager clicks Statistics tab.
2. Manager clicks the view all employees button.
3. System will load all employees in the table.

HR Use Cases (10-14)

Use case: UC-HR_APP_10: Viewing all departments.

Actor: HR Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Manager clicks Statistics tab.
2. Manager clicks the view all department button.
3. System will load all departments in the table.

Use case: UC-HR_APP_11: Viewing employee personal information.

Actor: HR Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Manager clicks Employee management tab.
2. Manager selects an employee from the employee's table.
3. Manager clicks the View details button.
4. System displays a new form with employee's information.

Use case: UC-HR_APP_13: View Part-time shifts.

Actor: HR Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Employee clicks on History tab.
2. Employee clicks view part-time button.
3. System will display all part-time workers in the table.

Use case: UC-HR_APP_14: View Full-time shifts.

Actor: HR Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

4. Employee clicks on History tab.
5. Employee clicks view full-time button.
6. System will display all full-time workers in the table.

HR Use Cases (15-17)

Use case: UC-HR_APP_15: View Dayshifts.

Actor: Employee.

Pre-conditions: Employee is logged in.

Main Success Scenario:

7. Employee clicks on History tab.
8. Employee clicks view dayshifts button.
9. System will display all dayshifts in the table.

Use case: UC-HR_APP_16: View Nightshifts.

Actor: Employee.

Pre-conditions: Employee is logged in.

Main Success Scenario:

10. Employee clicks on History tab.
11. Employee clicks view nightshifts button.
12. System will display all nightshifts in the table.

Use case: UC-HR_APP_17: View Real-time Statistics.

Actor: Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Manager clicks on Statistics tab.
2. Manager clicks view all employees button or Get department information or Selects a month from the dropdown list.
3. System will display all employees or department's information or total hours per employee per month in their respective table.

HR Use Cases (18-19)

Use case: UC-HR_APP_18: Submit preferred shifts.

Actor: Employee.

Pre-conditions: Employee is logged in.

Main Success Scenario:

1. Employee clicks on Schedule Management tab.
2. Employee select date and hours from the dropdown lists.
3. Employee clicks on Submit Preferred Schedule button.
4. System will display the preferred date and hour in the table above.

Use case: UC-HR_APP_19: Make a schedule.

Actor: Manager.

Pre-conditions: Manager is logged in.

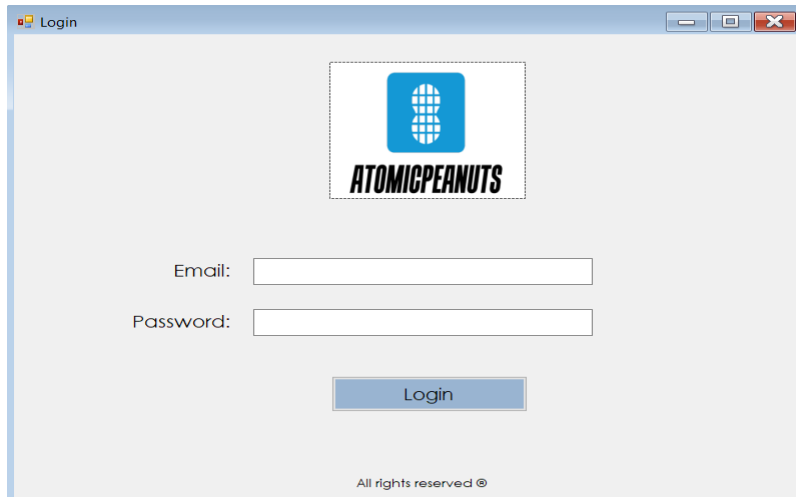

Main Success Scenario:

1. Manager clicks on Schedule Management tab.
2. Manager select date and hours from the dropdown lists.
3. Manager clicks on Submit Preferred Schedule button.
4. System will display the preferred date and hour in the table above.

Extensions:

- 2a. Manager selects an employee from dropdown list
 1. Work date will be filled with preferred working dates by the employee if they have submitted dates.
 2. Continue to step 3.
- 2b. Manager selects an employee from dropdown list
 1. Dropdown list will be filled with dates a week from the current day if they have not submitted dates.
 2. Continue to step 3.

GUI (Login & Employee System HR-App)

- Login page. User logs into the application with his/her credentials.

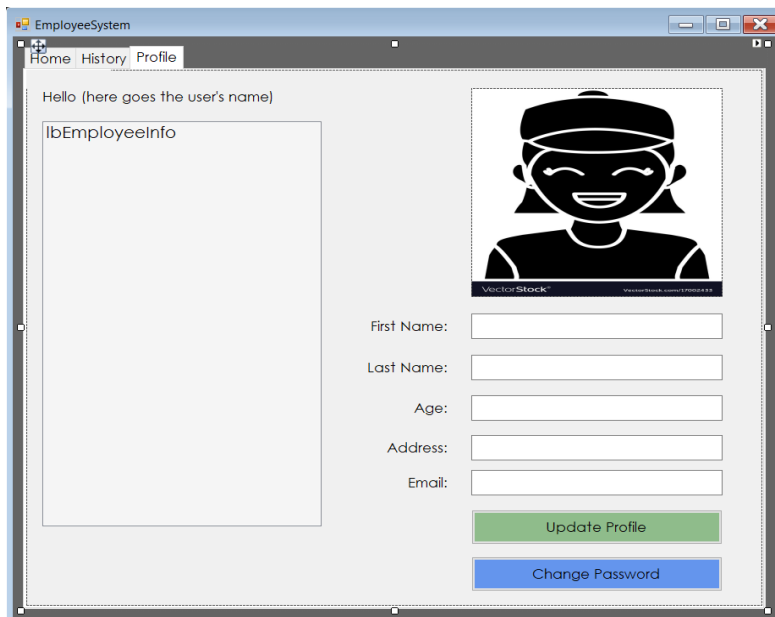

- After logging in, employees will get a schedule overview where they can view all work shifts.

GUI (Employee System HR-App)

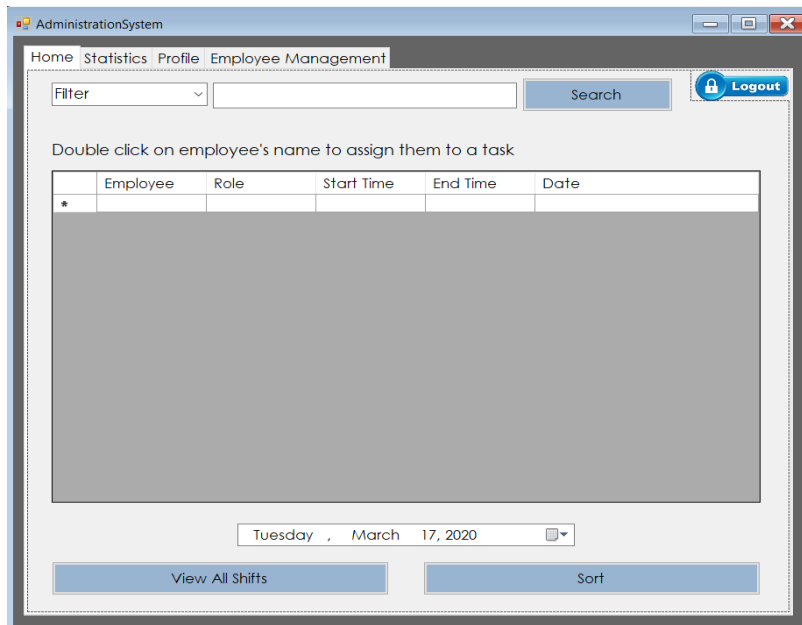

- Employees will only be able to view their work history and different shifts within the department they are employed.

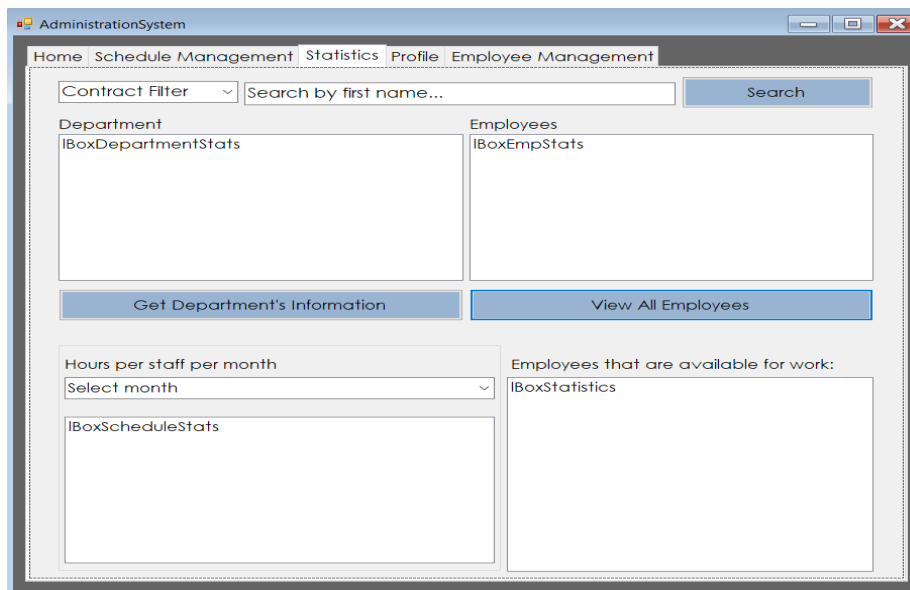

- The employee can view their profile or choose to update personal information by filling in the textboxes and clicking update profile.

GUI (Administration System HR-App)

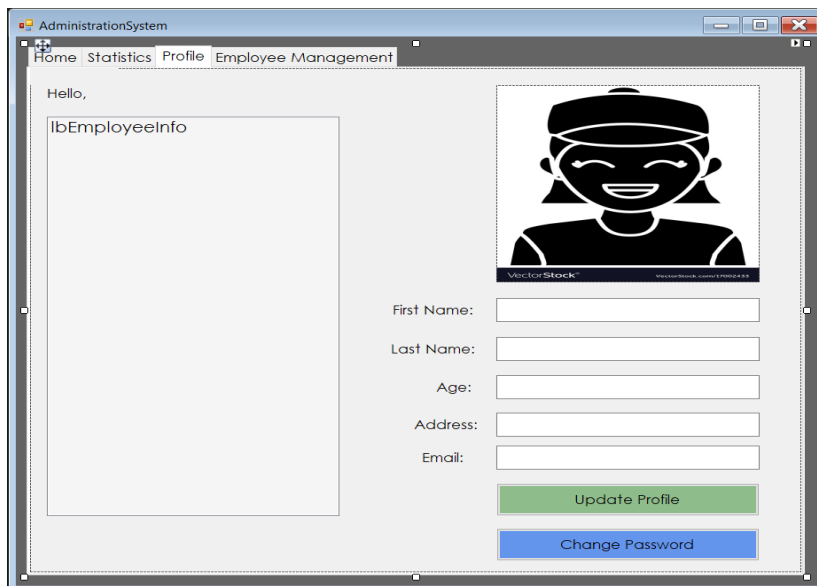

- After the manager logs in, they will get an overview of the schedule. As manager, they would be able to view all work shifts, sort table or assign an employee to a shift.

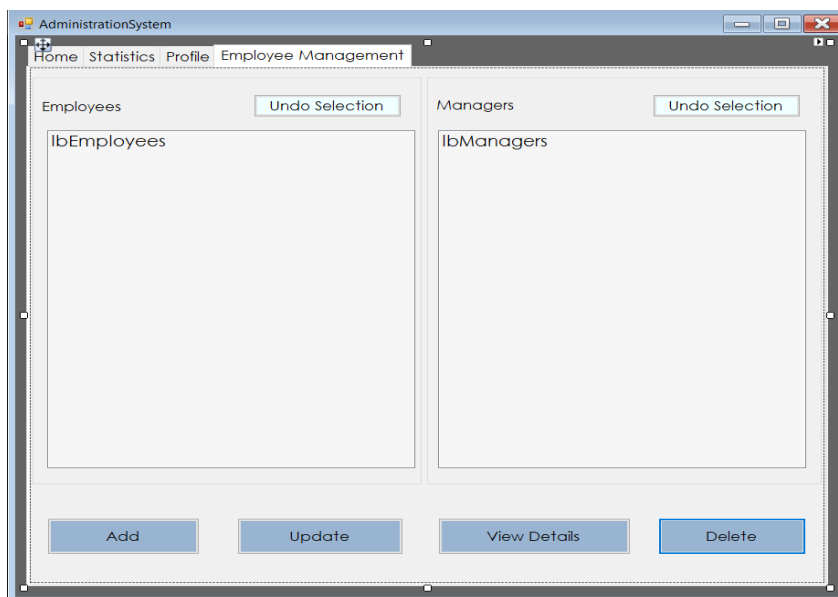

- Managers will be able to view department's information. All employees (not managers) employed at that department, employees with hours available to work and to view total hours per employee per month

GUI (Administration System HR-App)

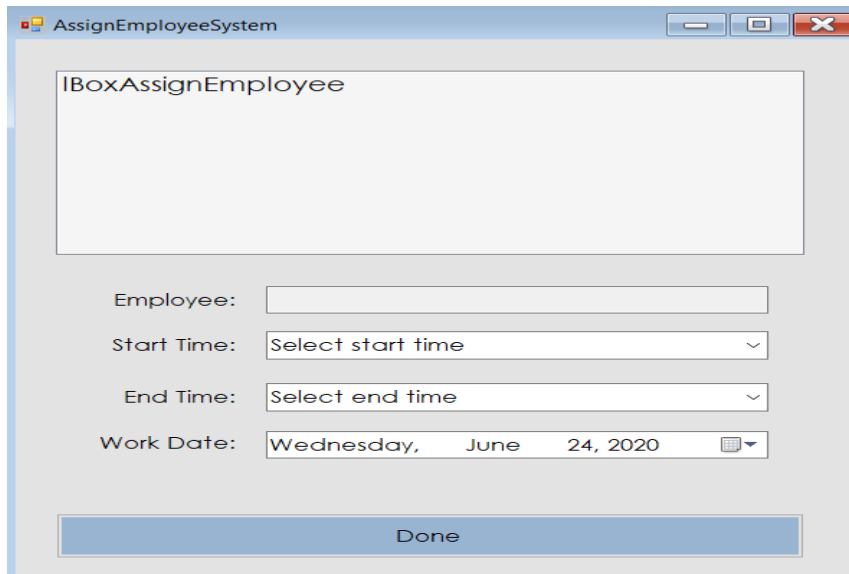

- Managers will be able to view and update their profile on the Profile tab.

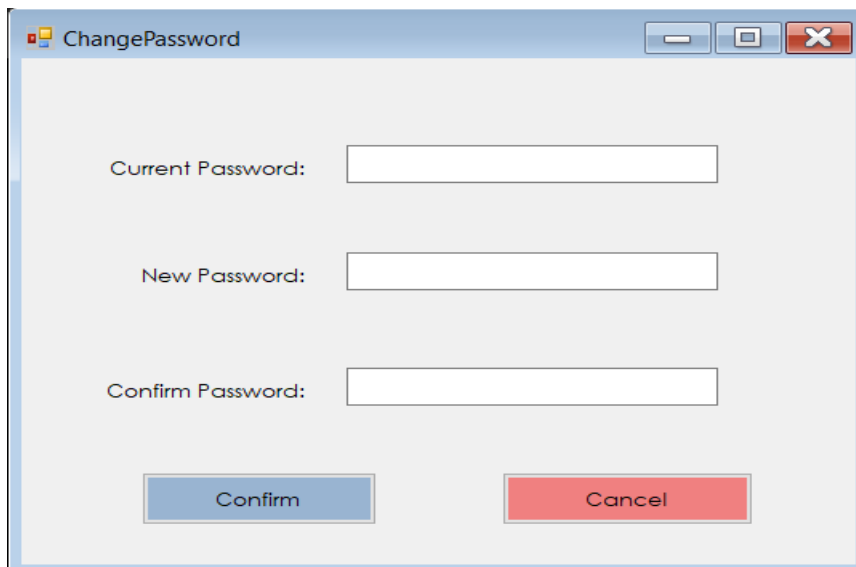

- On this page, managers can add, view, update or delete employees from the system.

GUI (Administration System HR-App)

The screenshot shows a window titled "AssignEmployeeSystem" with standard Windows window controls (minimize, maximize, close). Inside the window, there is a large empty rectangular box at the top labeled "IBoxAssignEmployee". Below this box are four input fields: "Employee:" with a text box, "Start Time:" with a dropdown menu showing "Select start time", "End Time:" with a dropdown menu showing "Select end time", and "Work Date:" with a date picker showing "Wednesday, June 24, 2020". At the bottom of the window is a blue button labeled "Done".

- When a manager chooses to assign an employee, this form will be displayed.

The screenshot shows a window titled "ChangePassword" with standard Windows window controls (minimize, maximize, close). Inside the window, there are three input fields: "Current Password:" with a text box, "New Password:" with a text box, and "Confirm Password:" with a text box. At the bottom of the window are two buttons: a blue "Confirm" button and a red "Cancel" button.

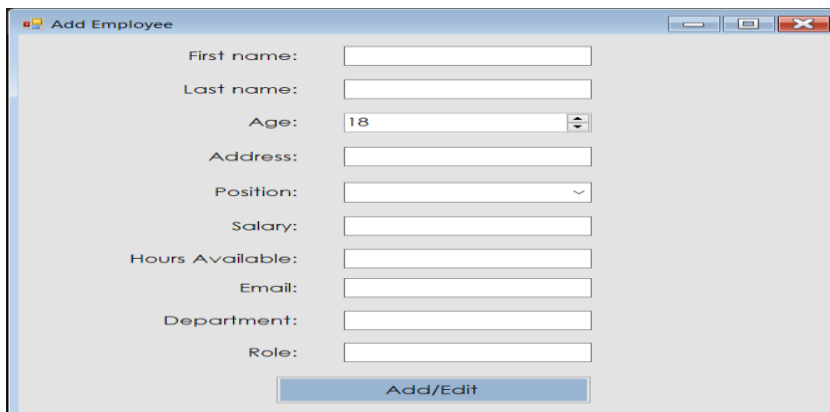

- This form will be displayed when manager wants to change a staff member's password.

GUI (Administration System HR-App)

A screenshot of a software window titled "Employee Details". The window has a standard Windows-style title bar with minimize, maximize, and close buttons. The main content area is light gray and contains the following labels stacked vertically: "First name:", "Last name:", "Age:", "Address:", "Position:", "Salary:", and "Hours Available:". There are no input fields visible in this view.

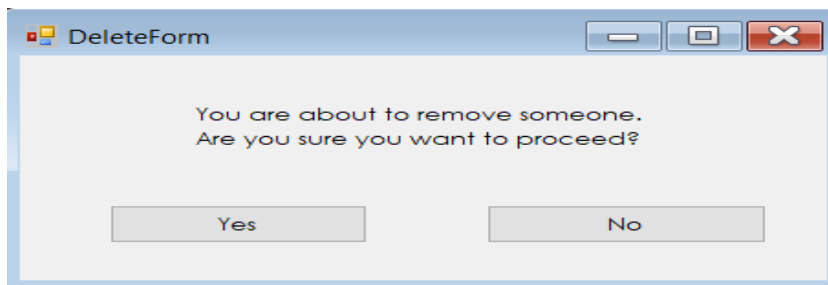

- Managers will be able to view personal information of employees; this can be done when clicking view details button on the employee management tab.

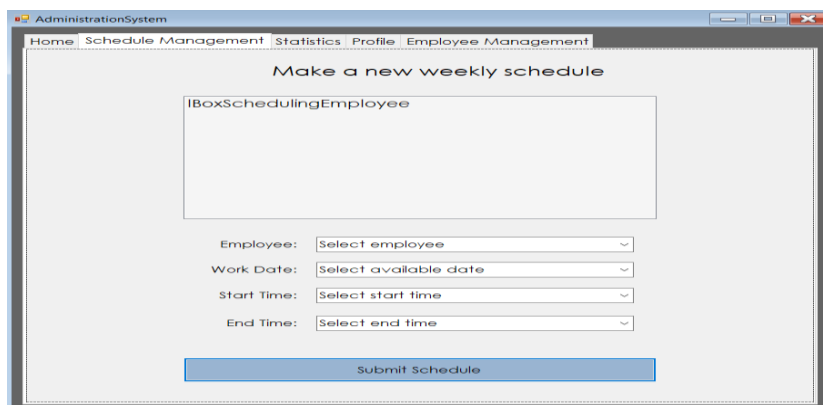

A screenshot of a software window titled "Add Employee". The window has a standard Windows-style title bar with minimize, maximize, and close buttons. The main content area is light gray and contains the following labels with corresponding input fields: "First name:" (text box), "Last name:" (text box), "Age:" (spin box with "18" selected), "Address:" (text box), "Position:" (dropdown menu), "Salary:" (text box), "Hours Available:" (text box), "Email:" (text box), "Department:" (text box), and "Role:" (text box). At the bottom center of the window is a blue button labeled "Add/Edit".

- When managers decide to add an employee, this form will be displayed. Behind the scenes a schedule will be automatically created as well.

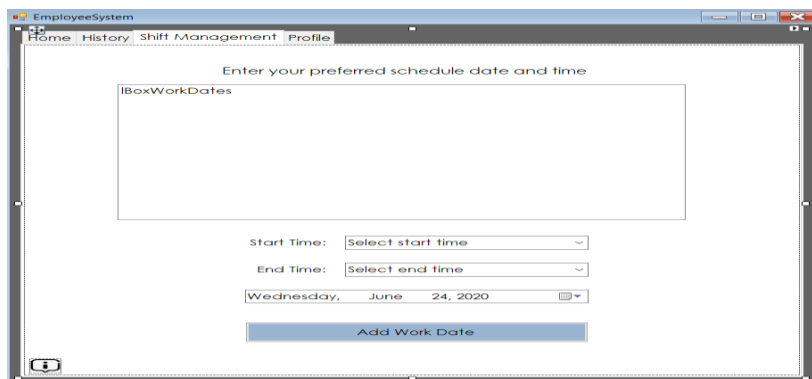

GUI (Administration System HR-App)

- When deleting an employee or firing an employee, this form will be displayed to make sure that the manager does not fire an employee by mistake.

- On this page managers can make schedules based on the preferred shifts submitted by the employee or they can make a new schedule if no dates was submitted.

- On this page the employee has the ability to submit their preferred shift.

Stock Functional Requirements

- FR-SM_APP_01: A user must be able to view products per category.
- FR-SM_APP_02: A user must be able to see all products.
- FR-SM_APP_03: A user must be able to see all orders.
- FR-SM_APP_04: A user must be able to make an order requests for stock.
- FR-SM_APP_05: A user should be able to view a product on product info page.
- FR-SM_APP_06: A user must be able to add categories.
- FR-SM_APP_07: A user should be able to receive an email after requesting an order for new stock.
- FR-SM_APP_08: A user should be able to search inventory on the inventory page.
- FR-SM_APP_09: A user should be able to search categories on the category page.
- FR-SM_APP_10: A user should be able to search orders on the orders page.
- FR-SM_APP_11: A user must be able to login.
- FR-SM_APP_12: A user must be able to logout.
- FR-SM_APP_13: A user must be able to update a category.

Stock Use Cases (1-3)

Use case: UC-STOCK_APP_01: View all products within a category.

Actor: Stock Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Manager clicks on Categories from the side-menu.
2. Manager clicks on the category name (link).
3. System will open a page with products.

Extensions:

- 3a. System will display data
 1. If data is available, the table will be filled with products.
 2. If no data is available, a warning message will display that no products are available.
 3. End of step 3.

Use case: UC-STOCK_APP_02: View all products.

Actor: Stock Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Manager clicks on Inventory from the side-menu.
2. System will display a page with all products and additional information.

Use case: UC-STOCK_APP_03: View all orders.

Actor: Stock Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Manager clicks on Orders from the side-menu.
2. System will display a page with all orders in a table.

Stock Use Cases (4-5)

Use case: UC-STOCK_APP_04: Making an order request for new stock.

Actor: Stock Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Manager clicks on Stock Request from the side-menu.
2. System opens a page with inputs and dropdown lists.
3. Manager fills in and selects information then submits the requests.
4. The system will display a pop-up message that requests is successful with order ID.

Extensions:

3a. Submitting the request

1. If email is correct and inputs is filled, the request will be submitted.
2. If email is incorrect and inputs are not filled, the request will fail, and error message will notify user that request is failed.
3. End of step 3.

Use case: UC-STOCK_APP_05: Viewing product information.

Actor: Stock Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Manager clicks on Inventory from the side-menu.
2. System will display a page with all products and additional information.
3. Manager clicks on the product name (link).
4. System will open a page with product information displayed in a table.

Stock Use Cases (6-7)

Use case: UC-STOCK_APP_06: Add a new category.

Actor: Stock Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Manager clicks on Categories from the side-menu.
2. System opens a page with categories information in a table.
3. Manager clicks the “Add category” button.
4. The system opens a page with empty inputs.
5. Manager fills inputs and submits.

Extensions:

5a. Submitting a new category:

1. If inputs are filled, the request will be submitted.
2. If inputs are empty, the request will fail, and error message will notify user that request is failed.
3. End of step 3.

Use case: UC-STOCK_APP_07: Receive email after requesting new stock.

Actor: Stock Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Manager clicks on Stock Request from the side-menu.
2. System opens a page with inputs and dropdown lists.
3. Manager fills in and selects information then submits the requests.
4. Managers receives an email with order is confirmed and order ID.

Stock Use Cases (8-9)

Use case: UC-STOCK_APP_08: Searching information on inventory page.

Actor: Stock Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Manager clicks on Inventory from the side-menu.
2. System will display a page with all products and additional information.
3. Manager types word or letter in the search bar

Extensions:

3a. Searching:

1. If data exists, the table will display information in table.
2. If data does not exist, the table will be empty, thus, no data found.
3. End of step 3.

Use case: UC-STOCK_APP_09: Searching information on categories page.

Actor: Stock Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Manager clicks on Categories from the side-menu.
2. System will display a page with all categories.
3. Manager types word or letter in the search bar

Extensions:

3a. Searching:

1. If data exists, the table will display information in table.
2. If data does not exist, the table will be empty, thus, no data found.
3. End of step 3.

Stock Use Cases (10-11)

Use case: UC-STOCK_APP_10: Searching information on orders page.

Actor: Stock Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Manager clicks on Orders from the side-menu.
2. System will display a page with all orders.
3. Manager types word or letter in the search bar

Extensions:

3a. Searching:

1. If data exists, the table will display information in table.
2. If data does not exist, the table will be empty, thus, no data found.
3. End of step 3.

Use case: UC-STOCK_APP_11: Logging in.

Actor: Stock Manager.

Main Success Scenario:

1. Manager goes to site URL.
2. System will display a page with an empty form.
3. Manager types passcode.
4. Managers logs in.

Extensions:

3a. Attempting to log in:

1. If passcode is correct, the manager will be logged in and redirected to homepage.
2. If passcode is incorrect the page will be refreshed, thus the passcode is not valid.
3. If the passcode is not equal to a 4-digit number, the system will display an error. Please enter the correct passcode
4. End of step 3.

Stock Use Cases (12-13)

Use case: UC-STOCK_APP_12: Logging out.

Actor: Stock Manager.

Pre-conditions: Manager is logged in.

Main Success Scenario:

1. Manager clicks on Logout from the side-menu.
2. System will log manager out and redirect to the login page.

Use case: UC-STOCK_APP_13: Update a category.

Actor: Stock Manager.

Pre-conditions: Manager is logged in.

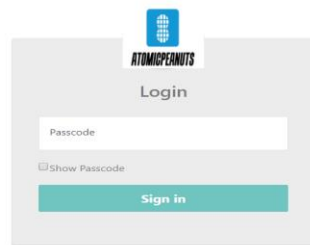

Main Success Scenario:

6. Manager clicks on Categories from the side-menu.
7. System opens a page with categories information in a table.
8. Manager clicks "Edit" button from the table.
9. The system opens a page with pre-filled inputs (The selected category data).
10. Manager fills new information in and submits.

Extensions:

- 5a. Submitting the updated category:
 4. If inputs are filled, the request will be submitted.
 5. If inputs are empty, the request will fail, and error message will notify user that request is failed.
 6. End of step 3.
